documentation

DEFAULT

cloudguard-waf

argos-erm

spark-management

harmony-sase

workforce-ai

the three DEFAULT ones ship by default; the rest need tenant creds

Interactive-only auth

agent-side secret · answered in the agent loop

quantum-gaia

agent-side secret · answers the login prompt

The Gaia server authenticates via an interactive MCP login prompt. Unlike the AWS gateway, **studio does relay elicitation** — so it works here, answered agent-side from the chkpmcp-quantum-gaia secret (or GAIA_* env vars).

Excluded from the default and from --servers all.

chkpmcpaz deploy brings up 9 of 15 by default · --servers adds any by name · set credentials with chkpmcpaz creds template then apply
